Interfaces for Vertex AI

Send feedback

On this page
What's next

This page describes the interfaces that you can use to interact with Vertex AI and when you should use them. You can use these interfaces along with one of Vertex AI's [notebook solutions](#).

Some Vertex AI operations are only available through specific interfaces, so you may need to switch between interfaces during your workflow. For example, in Vertex AI Experiments, you must use the API to log data to an experiment run, but you can view the results in the console.

Console gcloud Terraform Python REST More

The Google Cloud console is a graphical user interface that you can use to work with your machine learning resources.

In the Google Cloud console, you can manage your managed datasets, models, endpoints, and jobs. You can also access other Google Cloud services, such as Cloud Storage and BigQuery, through the console.

Use the Google Cloud console if you prefer to view and manage your Vertex AI resources and visualizations through a graphical user interface.

For more information, see the **Dashboard** page of the Vertex AI section:
